To Our Customers

erewith we present our No. 69 Catalog. With the return of more normal conditions many changes have been made in hardware lines, and we are able to offer a more complete assortment than in several years.

Lists and discounts as explained in the attached slip should enable our customers to solicit orders upon many items not ordinarily carried in stock.

New goods have been added, and in so far as possible changes in design, lists, etc., have been made up to the date of issue.

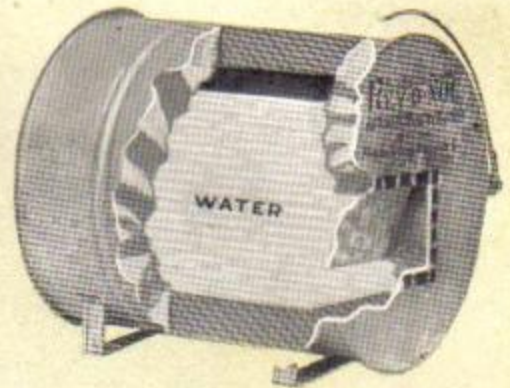

We have tried to keep our catalog simple and compact, and hope that we have the approval of the trade.

Yours truly,

Hubbard Spencer Bartlett & Co.

Porcupine WEANER

REG. U.S. PAT. OFF.

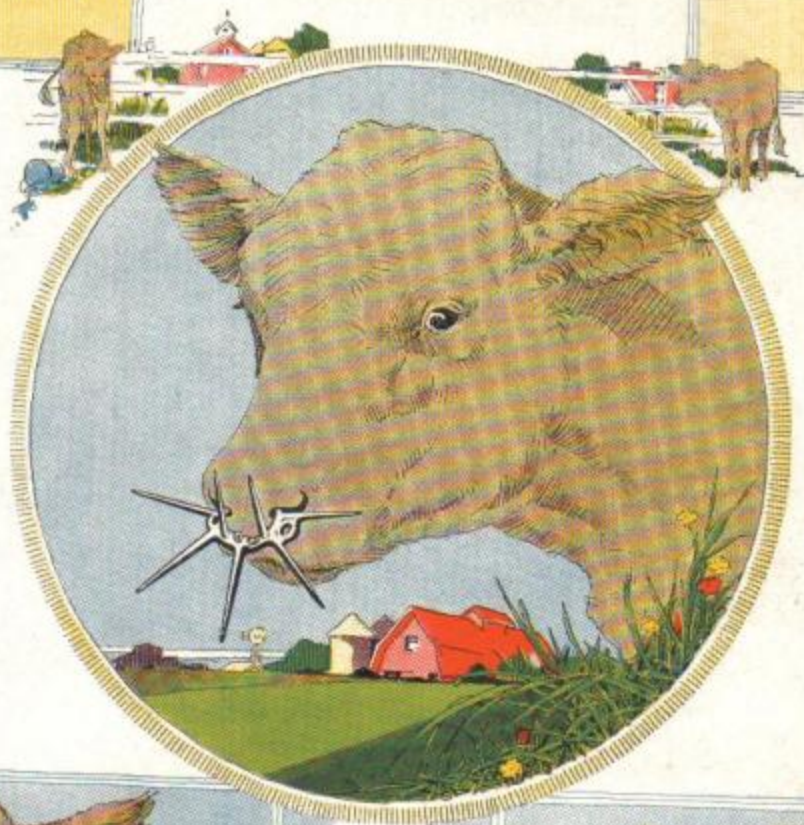

Effective—It causes the cow to resist attempts at sucking; other types don't.

Humane—Prevents constant annoyance to cow during weaning period.

Safe—Spacing of ball tips controlled by the Stop prevents ulceration from pinching.

Sanitary—Permits calf to graze without entanglement of dirt or trash.

Non-rusting, adjustable ball-tipped nose ring, with seven smooth prongs. Fastened by steel cotter.

FOR CALVES

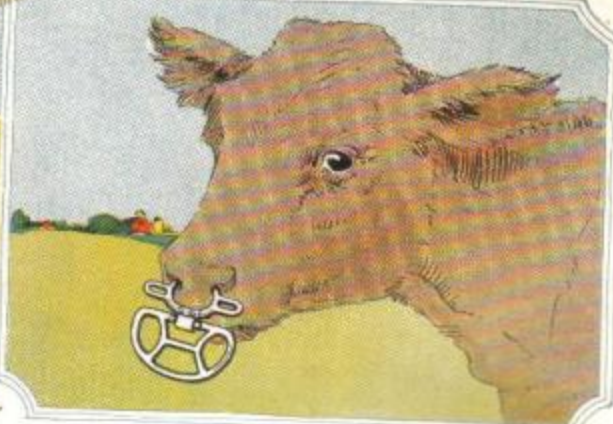

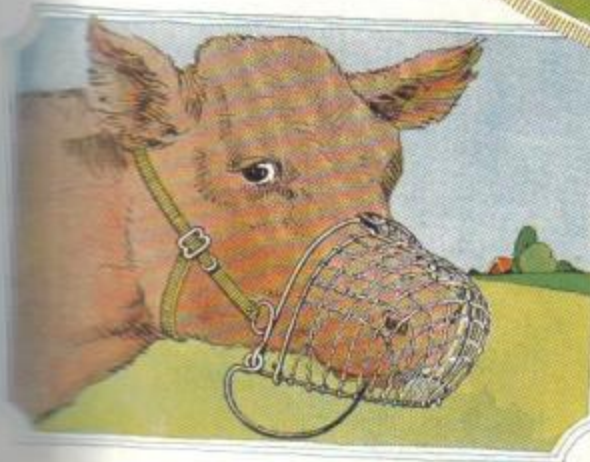

No. 131—Width closed 4½ in., nose ring 17/16 x 5/8 in., w't per doz. 2 lbs., per dozen\$6.00

FOR YEARLINGS

No. 132—Width closed 6½ in., nose ring 1½ x 1½ in., w't per doz. 2½ lbs., per dozen\$8.00

FOR COWS

No. 133—Width closed 7½ in., nose ring 2½ x 1½ in., w't per doz. 4 lbs., per dozen\$9.60
ONE DOZEN IN A BOX

HEW'S Patent, Carroll, Tinned Wire Muzzle, Web Halter.

No. 1—For calves, w't per doz. 9 lbs.per dozen \$7.20

No. 2—For yearlings, w't per dozen 11 lbs., per dozen\$8.40

No. 3—For cows and horses, w't per doz. 16 lbs., per dozen\$9.60

NO. 1 AND 2, ONE DOZEN; NO. 3, HALF DOZEN IN A CARTON

KANT SUK, Tinned Malleable Iron.

"Kant Suk" Calf Weaners are absolutely safe, cannot injure cow or do injury to calf. Permits calf to graze, eat or drink, still effectually prevents sucking of cow. Can be used for tying or leading calves, also cows.

No. 111—For calves, w't per doz. 3½ lbs., dozen \$7.20

No. 112—For cows, w't per doz. 5 lbs., dozen 7.20

ONE-PIECE WELDLESS AXES

ONE PIECE CONSTRUCTION

Eliminating high welding heats, mis-welds, soft body steel and all other faults of old style welded axes, **ONE-PIECE** axes are one-piece from bit to head, with no joint, seam, weld or weakness of any sort.

HIGHEST GRADE STEEL

The result of years of experience and service tests, evolving an axe steel which is a revelation in hardness and toughness.

SPECIAL DOUBLE TEMPER

Careful heat treatment gives extreme toughness and stiffness combined with special tempering at the bit to produce a keen edge, hard yet tough.

LONG SERVICE

Bits are hardened all the way through, $1\frac{1}{2}$ inches back, or more. Can be ground repeatedly without reaching soft temper, thus doubling the life of the axe.

RIGIDITY OF EYE

The toughening of the steel, together with the reinforcing of the eye by our taper-punching process, affords an eye which will never buckle, even under severest service.

HARDENED FACES

Not soft steel as in most axes, but crucible steel. Will stand hard service without battering.

UNIFORMITY OF SHAPE

Patterns are accurate and uniform, not the hit-or-miss patterns resulting from usual guess-work methods.

HANDLES

We handle axes to order with a wide selection of handles, from **ONE-PIECE** hand-shaved finest second-growth white hickory, to competitive grades of good value. Patterns large or small, straight or regular, octagon or oval, long or short as desired.

OUR WARRANTY

ONE-PIECE Axes are warranted perfect in material, temper and serviceability. They will stand the hardest of fair service, and even much abuse, **BUT OUR WARRANTY DOES NOT COVER ABUSE.** **ONE-PIECE** Axes are ground correctly. If they break because re-ground too thin by the user, we cannot replace. Return to us, **LESS HANDLE**, any **ONE-PIECE** axe claimed defective, and each case will be adjusted fairly, on its merit.

POSITIVELY NO AXES EXCEPT **ONE-PIECE U. S. A. AND HIBBARD ARE WARRANTED OR REPLACED.**

OYB IVORY BLACK AXES

AXES—Highest Quality Forged Crucible Steel, Smooth Ivory Black Finish with **OYB** Trade Mark Deep Etched in Gold. Carefully Hand Tempered, Keen, Thin-Ground Bits, with Edges Polished and Hand-Honed. Warranted Against Defects in Material and Workmanship. Our Most Practical and Beautiful Finish.

HANDLES—Our Handles are Specially Graded and Gauged for the Purpose and We Guarantee Correct "Hang" and Secure Wedging.

HALF DOZEN IN A BOX

BROAD AXES

Extra quality forged tool steel, ivory black rust-proof polished finish, polished face and bevel. Large, full eye, built to take a stout, husky handle.

Eye very broad, giving a better hold and leverage on the handle. Eye set close to the blade, gives user perfect control of the cutting edge.

Long, narrow blade, carried full to end of cutting edge, the weight evenly distributed. Makes a perfect balance for a true stroke.

A straight edge, laid from top of head to cutting edge, touches the bottom of the eye and cutting edge only. The head set forward slightly, axe cannot bind in the wood.

Ground accurately, with a perfectly straight edge, except that the corners are set forward slightly giving timber spring. Corners cannot catch or gouge.

Improved Canada Pattern, Round Edge, Ridge Bit.

CUT BRONZED HATCHETS

A line of Hatchets expressly made for the carpenter and builder, whose requirements are most exacting. We would not know where to look for better quality, pattern and construction in any hatchet than we have attained in **CUT**. Each tool is forged from highest quality tool steel, scientifically heat-treated, and tempered to give a cutting edge which is hard, yet tough. So seldom is resharpening required that the **CUT** Hatchets will be found remarkably long-lived.

Each hatchet is fitted with a well-shaped handle of selected white second growth hickory, waxed, with flared end to prevent slipping. The balance or "hang" is correct for easy, fast and accurate work. Heads are beautifully shaped, with smooth, gold-bronzed finish, and highly polished bit and face. A display of these tools in the dealer's window or show case is a joy to behold. **EACH CUT HATCHET IS FULLY WARRANTED.**

OLD POLISHED HATCHETS

A line of Hatchets expressly made for the carpenter and builder, whose requirements are most exacting. We would not know where to look for better quality, pattern and construction in any hatchet than we have attained in **OLD**. Each tool is forged from highest quality tool steel, scientifically heat-treated, and tempered to give a cutting edge which is hard, yet tough. So seldom is resharpening required that the **OLD** Hatchets will be found remarkably long-lived.

Each hatchet is fitted with a well-shaped handle of select white second growth hickory, waxed, with flared end to prevent slipping. The balance or "hang" is correct for easy, fast and accurate work. Heads are beautifully shaped, with full polished finish, etched with our **OLD** trade-mark. A display of these tools in the dealer's window or show case is a joy to behold. EACH **OLD** HATCHET IS FULLY WARRANTED.

HALF DOZEN, ASSORTED, IN A BOX. WE DO NOT BREAK BOXES

Whatever the price you can afford, we have the best Hatchet for the money.

We would rather sell you the ~~CRUSO~~ because it is THE VERY BEST, and couldn't be better at double the price.

But if you MUST consider price, try the ~~REYNOLDS~~, first quality black—for hard service, the CRUSO, standard quality black—for all ordinary uses, the CALUMET or BURNOR, for light household use or for the woodshed. All are full value for the price we ask.

CLYDE HAMMERS

Steel—Crucible steel of special analysis, proven the best by years of experience, and tested constantly to insure uniformity of composition.

Temper—Tempering and hardening heats regulated automatically by thermometer. Steel of uniform composition, uniformly treated, must give uniformly perfect results.

Faces—Of extreme hardness, yet not brittle, will do the severest work without cracking, denting or breaking down.

Claws—Short, compact, tough, with fine drawn slot, whose sharp knife edge will grip and hold and pull straight any nail which will enter it.

CLYDE NAIL HAMMER HEAD

Sectional cut of **CLYDE** Bell Face Hammer Head, showing eye tapering from both ends towards the center, and Patent Wedge, which locks the handle perfectly. It cannot come out. Notice also the perfect proportions of the head.

Patterns—Embodying the best suggestions of scores of practical mechanics. No "hit or miss" designs, but the best shape in each tool for comfort and efficiency.

Handles—Turned from best second growth white hickory, split, not sawed, insuring straight grain. Made with full grip and slightly flared end will not slip from hand. Wedged with patent wedges, heads and handles never part company.

Finish—A high mirror polish. The artistic stamp and label brand each tool now and always as **CLYDE**.

CLYDE OCTAGON NAIL

Octagon neck, octagon face, full nickel plated and bur-nished head, cherry stained select second growth hickory handles.

OYB HAMMERS

OYB—Under this stamp and label we supply a complete line of Hammers, which the experience of many years has proven to be the finest obtainable from any source, whether judged by appearance, ability to stand hard service, or the "hang" and balance which so greatly enhance the ease and speed of operation.

Steel—Each hammer is forged from crucible steel of special analysis, tested constantly to insure uniformity of composition.

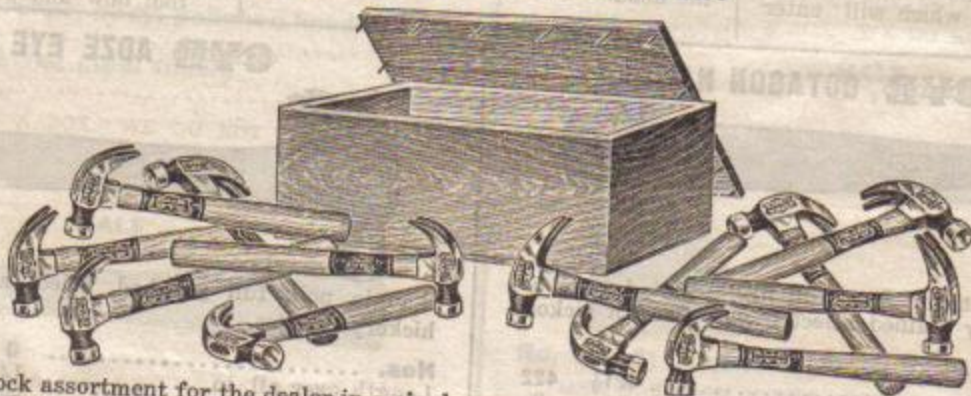

Temper—The tempering and hardening heats are regulated automatically by thermometer, so that definite and perfect uniformity of hardness and toughness results in each tool.

Faces—The striking faces are extremely hard, not brittle, and will do the severest legitimate work without cracking, denting or breaking down.

Patterns—The patterns embody the best suggestions of scores of practical mechanics, and each tool has the shape proven best for comfort and efficiency.

Handles—Handles are turned from the best second growth, white hickory, straight grain, made with full grip and securely wedged.

Finish—Each polished tool has a high mirror polish, while the artistic stamp and label brand each tool now and always as **OYB**.

HIBBARD HAMMERS

HIBBARD Hammers are first quality in every particular, and in appearance and quality are fully up to the standard of the best and most widely known brands on the market. In price they will be found always favorable as compared to the ruling market prices on other high grade tools, and the dealer may feature and push this line with confidence that it will make friends for him and bring "repeat" orders.

Each tool is forged from extra quality, crucible steel, hardened and tempered with the utmost care. The patterns are standard, and will meet the approval of expert workmen.

Handles of select white hickory, properly shaped and "hing"; finish, branding and labeling so attractive as to greatly aid their salability. Each HIBBARD Tool fully warranted against defects in material or workmanship.

CRUSO HAMMERS

Under our Cruso Brand we offer a line of good quality, forged steel Hammers, suitable for all ordinary purposes, and which will be found highly satisfactory for use around the farm, house or shop. While Cruso Tools are neat and attractive in appearance, they have not the high finish or superior grade of handles used in our **CRUSO** or **HIBBARD** tools. Every Cruso Hammer is a surprising value for the price we ask.

WHITE MASONS' TAPE

Rubberized Fabric, ¼ in. Wide, Similar to Tire Tape.

White Mason tape is used for wrapping the fingers and hands of stone masons, bricklayers, mechanics and kindred trades. Is also used for wrapping tool handles, baseball bats, etc.

The strong friction, wearing and insulating qualities of this tape, together with its light color, makes its particularly adapted for interior work in the electrical line.

No. 2½—¼ lb. roll, w't per doz. 3 lbs., per dozen\$3.60
ONE ROLL IN A CARTON; 100 LBS. IN A CASE

AXE RACKS

Can be used on the counter or on the wall by supporting with brackets. For counter use a fine display can be made by placing two racks back to back. The rack is ornamental and attractive, and will save its cost by keeping axes off the floor, away from the dirt and sprinkler.

No. F15 Briggs—Semi-circular, hard wood, painted red, base 22½x11½ in., height 13 in., holds up to sixteen handled and sixteen unhandled axes, w't each 16 lbs., each★\$7.50
ONE IN A FIBRE SHIPPING CARTON

NOTE—We do not give away Axe Racks as premiums.

ONE SOLID HANDLE CHISELS

ONE Solid Handle Chisels, Beveled Edge, Polished Blade, Stained Handle. Blade, Shank and Head are One Piece of Solid Steel. Blade is Forged from One End of Steel Rod which Goes Entirely Through the Handle, the Other End Being "Up Set" to Form the Head. A Leather Washer is Placed Under Head to Act as a Cushion. With this Form of Construction the Full Power of the Blow is Transferred from the Head to the Cutting Edge.

All saws filed and set, ready for use.

All saws under 6 inches in diameter take the list of a 6-inch saw.

All saws of odd diameters take the list of next larger saw.

No extra charge for saws one gauge thicker than list. No extra charge for saws one to three gauges thinner than list; when more than three gauges thinner than list, add 5 per cent for each gauge.

Saws 48 inches and under, and 62 inches and over, in diameter, more than two gauges thinner than list, not warranted. Saws 50 inches to 60 inches in diameter thinner than 10 gauge, not warranted.

Saws 42 inches or less in diameter beveled one gauge without extra charge; 44 inches or larger beveled two gauges without extra charge.

Saws hollow or concave ground add for each additional gauge hollow or concave ground double the list for beveling.

Saws for cutting bone, horn and ivory, add 50 per cent to the above list.

When these saws are hollow or bevel ground, the 50 per cent advance is to apply only on the list price of a straight gauge saw, and not to apply on the extras for hollow or bevel grinding.

CIRCULAR SAW MANDRELS

Pulley in Center.

Pulley on End.

Stock has pulley on end, left hand tread.

Latest improved pattern made from high grade, cold drawn steel shafting and best quality gray iron castings. Boxes are filled with high speed bab-bitt metal, and are parted for taking up the wear.

Made with the pulley on the right hand side when saw is running toward you, unless otherwise ordered.

NEW SELF-SETTING IRON PLANES
SMOOTH BOTTOM

The cutter irons are made from special high grade steel, are thin and easily kept in order.

The malleable Frog and Steel Cap reduce greatly the liability of breakage.

Handle and knob are made of highly finished, thoroughly seasoned rosewood. They are securely fastened to plane with steel rods that have brass screw heads. Trimmings are nickel plated and japanned, giving the planes a very fine finish throughout.

The principal features of this line of new Planes are the self-setting cutting iron, the rigidity with which this is held in place by the plane cap, thus preventing any chatter in Plane, the fine adjustments that can be made with cutter for all kinds of work and the few parts used in its construction, which make it almost entirely free from any costs for repairs.

The Planes are set for fine work when they leave the factory.

OYE SELF-SETTING IRON PLANES

CORRUGATED BOTTOM

Corrugated bottom planes are preferred by many users, because of there being less friction from the bottom, runs a little lighter. They have the self-setting cutter iron made from special high grade steel.

The malleable Frog and Steel Cap reduce greatly the liability of breakage.

The Handle and Knob are made of highly finished, thoroughly seasoned rosewood. These are securely fastened to plane with steel rods that have brass screw heads. Trimmings are nickel plated and japanned. Plane is finely finished throughout.

The self-cutting feature lies in the construction of the plane iron. If taken out to be honed or sharpened, goes back in same position as before removal. The plane cannot chatter because the cutter iron is held rigid at the point by the cap; at the same time the cap screw used for tightening the cap is pressing against the binder plate on top of the cutter iron. This pressure against the binder plate holds the cutter firm its entire length.

WOOD SELF-SETTING WOOD PLANES

Wood planes are preferred by many because of being lighter in weight than the iron planes.

Wood Planes are made of specially selected beechwood, thoroughly seasoned and dried.

The iron frog with adjustable throat will lengthen greatly the life of these wood planes, as this frog and throat can be moved up to permit the bottom of the plane to be trued up when worn.

The cutter iron can also be adjusted sideways by loosening the small screw that holds the binder plate to cutter.

Keep cutter iron sharp and properly adjusted, and you will have a plane that is easy to push and will give the greatest satisfaction. In sharpening, care should be taken to keep the cutting edge straight and square with the edge of the cutter iron. Cutting iron can be adjusted sideways by loosening the set screw that holds binder plate to top of cutting iron.

HACK SAW BLADES

HAND BLADES

Q&A Hack Saw Blades are built to stand the "gaff."
Q&A is preferred by expert metal cutters. They are the men who know how well a good hack saw should "stand up."
 Flexible blades have soft backs and hardened and tempered cutting edges. They are less liable to break than the all hard blades.

LOOSE

Instantly and securely fastened to a work bench without the aid of screws or nails or other means of fastening.

It self-adjusts the saw, saving time, and clamps or releases the same instantly. Will hold saw for jointing by passing blade through and resting the heel on the arch of the clamp.

No. 116—Perfection, malleable iron, japanned, with drive hooks to attach to bench or board, w't per doz. 31 lbs. per dozen \$16.50
QUARTER DOZEN IN A BOX

Can be fastened to a bench or board by either the clamp or screws, clamps fold out of way when not in use.

No. 200—Stearns', overhanging folding japanned, noiseless rubber cushioned jaw, w't per doz. 48 lbs., per dozen\$20.00
ONE IN A BOX

This is especially designed for those not skilled in saw filing, and is a help to an expert. It is adjustable to any and all positions, and when once set it is impossible to change the angle by mistake.

The clamp, guide, file and handle are included and not sold separately.

No. T3D—Disston's, japanned, extra heavy, adjustable, 12½ in. jaws, screw clamps for attaching to bench, complete with file, w't per doz. 234 lbs.per dozen \$104.00
ONE IN A BOX

The guide has three rigid positions in which it holds the file, one position for filing the saw on first side, another for filing it on the opposite side and a third for use in filing rip saws only. By means of the ball and socket joint the guide may be set at either of these positions, when thus set the file is rigidly held at the proper angle and incline for filing it is then impossible to file the teeth inaccurately.

No. 11—Stearns', japanned, nickel plated guide, adjustable to three rigid positions, 16 in. flat steel guide bar, 10½ in. planed jaws, rubber cushioned, screw clamp, complete with file, w't per doz 105 lbs., per dozen\$66.00
ONE IN A BOX

SIXTH DOZEN IN A BOX

SAW JOINTERS

It can be adjusted in a moment to the largest cross-cut or finest hand-saw, and will joint or square any straight edge. Flat, triangular or half-round file can be used, saves time, labor, wear and tear on the hands, and insures accuracy.

No. 1—Perfect, japanned steel, adjustable, length 4½ in., w't per doz. 8 lbs., per dozen\$12.00

HALF DOZEN IN A BOX

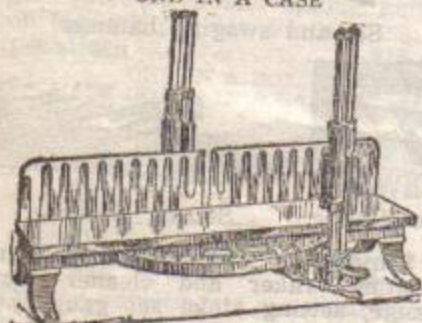

Black enamel finish with nickel trimmings—fitted with special back saw.

Notched segment and locking device is the most important improvement in Mitre Boxes as every angle is positive. Arrangement of work clamps make it possible to handle wider range of work. Device for controlling depth of saw cut and supporting saw above work is in one piece. Slight blow on top of saw will release it when held above work. Cast lugs on sides of saw guide posts hold saw guides in position so that saw slots are in line to receive the saw.

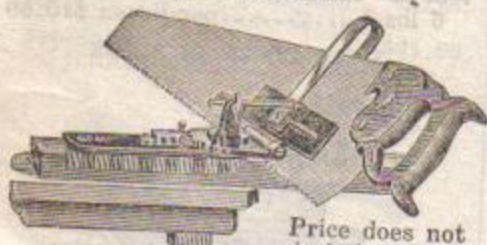

Nos.	T426	T528	T530
Saw, in.	26x4	28x5	30x5
Cap. r. angles, in.	8	8	9
Cap. at 45 deg., in.	6½	6½	7

PLANES "BAILEY" ADJUSTABLE IRON

The handle and knob are made of highly finished, thoroughly seasoned rosewood. The English steel cutter is tempered, ground and honed, ready for use, is adjustable both endwise and sidewise, and bedded to the heel of bevel. The width of mouth can be varied by changing the setting of the frog. Bottoms, either flat or corrugated—see cut 7C—as desired.

STANLEY "BED ROCK"

For fine work on hard and knotty wood, this plane surpasses all others.

The cutter, frog and bottom are so machined and fitted that they are practically one solid piece of metal, thus preventing any chance of vibration.

The frog travels in a groove, ensuring it being square with the mouth of the plane, and preventing shifting or "wobbling."

The width of the mouth can be regulated by use of a screw driver as shown in the cut, without removing the cutter and lever.

The cutters are made of the best English steel and are adjustable both endwise and sidewise.

The shape of the sides, a distinctive feature, adds greatly to the strength of the plane.

The handles and knobs are of rosewood and finely finished.

Bottoms either flat or corrugated (see No. 606C) as desired.

STANLEY IMPROVED SCRUB

Nº40

This tool has a single iron with cutting edge round and is particularly adapted for roughing down work before using jack or other planes.

Nos.	40	40
Length, in.	9½	10
Cutter, in.	1½	1
Each	\$3.10	4

ONE IN A BOX

STANLEY LOW ANGLE BLOCK

The construction of this plane is such that it is especially adapted for use in cutting across the grain on heavy work where more power is required than can be obtained by use of the ordinary block plane. The plane is fitted with an adjustable throat, which enables the user to work equally well on hard or soft wood.

No. 62—14 in., 2 in. cutter, w't 4 lbs.each \$7.25

ONE IN A BOX

STANLEY ADJUSTABLE PLANES

TONGUING AND GROOVING

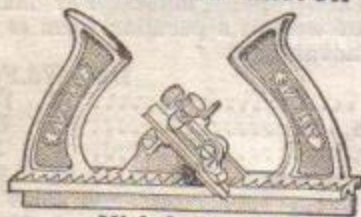

Nickel plated iron stock and face, including tonguing and grooving tools. The fence is set in a center pivot and can be swung around and locked either way. Set one way it exposes two cutters for cutting the tongue and when reversed leaves only one exposed for making the groove.

No. 48—8½ in., for ¾ to 1½ in. boards, w't 3 lbs.each \$6.80

No. 49—8 in., for ½ to ¾ in. boards, w't 2½ lbs.each \$6.80

ONE IN A BOX

DOUBLE END MATCH

Nickel Plated.

Provided with both tongue and groove irons. With one side a tongue can be cut, and by reversing ends, the plane will cut a groove to fit.

No. 146—Matches ¾ in. boards, cuts groove ½ in., w't 1½ lbs., each\$5.10

No. 147—Matches ¾ in. boards, cuts groove ¾ in., w't 2 lbs., each\$5.45

No. 148—Matches ¾ in. boards, cuts groove ¾ in., w't 2½ lbs., each\$5.75

ONE IN A BOX

RABBIT AND FILLISTER

The sides and bottom being square with each other, the planes will lie perfectly flat on either side. Adjustable fence slides under bottom to regulate width of cut. Has one spur on each side and adjustable depth gauge. Is suitable for either right or left hand work. The front part of plane can be easily detached thus providing a bull nose plane.

No. 278—Japanned iron stock and fence, 6½ in. long, 1 in. cutter, w't 2 lbs.each \$4.10

ONE IN A BOX

IMPROVED RABBIT

Iron stock, length 8 in., with depth gauge.

WITH SPUR

This plane will lie perfectly flat on either side, and can be used with right or left hand equally well, while planing into corners or up against perpendicular surfaces.

Nos.	190	191	192
Cutter, in.	1½	1½	1
W't, lbs.	2½	2½	2
Each	\$3.80	3.55	3.30

ONE IN A BOX

DUPLEX RABBIT AND FILLISTER

This plane has two seats for the cutter, one for regular work and the other where a bull nose is required. Has spur and removable depth gauge. Adjustable fence can be used on either side and slides under the bottom regulating width of cut. To use as rabbit plane, remove fence and arms.

No. 78—8½ in. iron stock and fence, 1½ in. cutter, w't 3 lbs., each\$4.20

ONE IN A BOX

SKEW CUTTER, FILLISTER AND RABBIT

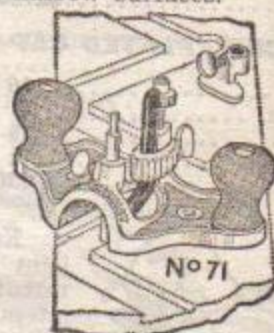

The fence and depth gauge can be attached to either side so that the plane can be used equally well for right or left hand work. The adjustable fence slides under the bottom, regulating the width of the cut. By removing arms and fence a skew cutter rabbit plane is obtained.

No. 289—8½ in., japanned, 1½ in. cutter with fence and depth gauge and two adjustable spurs, one on each side, w't 4 lbs.each \$4.90

ONE IN A BOX

WOODWORKERS' ROUTER

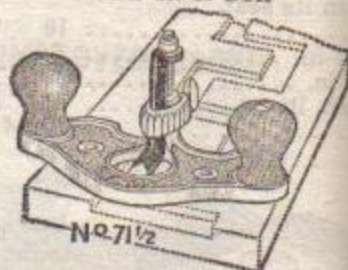

For surfacing the bottom of grooves and depressions parallel with general surface of the work. The open throat design gives more room for chips and a better view of the work and cutter. The latter has an attachment for regulating thickness of the chip and a second attachment for closing the throat use on narrow surfaces.

Open Throat.

No. 71—Nickel plated, width 7½ in. and ½ in. steel bits, with throat attachment, w't 2½ lbs., each\$5.50

ONE IN A BOX

Closed Throat.

No. 71½—Nickel plated, width 7½ in. and ½ in. steel bits, w't 2½ lbs., each\$4.50

ONE IN A BOX

DOOR TRIM

This new plane will make mortises for Butts, Face Plates, Strike Plates, Escutcheons, etc., without the use of a butt gauge or chisel. Cutter can be set to work from either end of the plane or across it. Spring prevents taking a heavier chip than can be easily carried.

No. 171—11 in., japanned, nickel plated trimmings, rosewood handles, 3 forged steel cutters, w't 3 lbs., each\$7.00

ONE IN A BOX

STANLEY PLANES, BEADERS, ETC.

CARRIAGE MAKERS' RABBET PLANES

Adapted for mining, wagon making and other heavy work.

Flat Bottom.

No.	101	10
Length, in.	9	13
Cutter, in.	2½	2½
W't. lbs.	3	4½
Each	\$6.80	8.20

ONE IN A BOX

SIDE RABBET PLANES

Convenient tools for side-rabbeting and trimming dados, mouldings and grooves of all sorts. A reversible nose piece will give each tool a form by which it will work close up into corners.

No. 95—4 in. nickel plated, right hand, w't 8 oz. each \$2.80

ONE IN A BOX

No. 96—4 in. nickel plated, left hand, w't 8 oz. each \$2.80

ONE IN A BOX

RABBET AND BLOCK PLANES

The detachable side will easily change this tool from block plane to a rabbet plane and vice versa. The cutter is adjustable end-wise and is set on askew.

No. 140—7 in., with detachable side, 1½ in. cutter, w't 1½ lbs., each \$3.80

ONE IN A BOX

IMPROVED DADO

8 Inch, Iron Stock, with Depth Gauge and Two Adjustable Spurs.

Holds true in narrow widths where a wood plane will not. Has a skew cutter and adjustable depth gauge and spurs on each side of plane, thus allowing wear to be taken up and depth of the cut regulated.

No.	392	393	394
Cutter, in.	1	1	1
Each	\$3.70	3.95	4.20

No.	395	396	397
Cutter, in.	1	1	1

BAILEY OLD STYLE

An improvement has been made in the "Bailey" Iron Plane which necessitated a change in the construction of the Bottom and Frog, thereby making it impossible to use the new style Frog in an old style Bottom, or the old style Frog in a new style Bottom.

For a time an intermediate style was made having same Frog and Bottom as the latest design, except that there was no Frog adjusting screw, consequently no clip on the Frog.

The latest design Frog or Bottom will be furnished for both the intermediate and new style Planes. If your Plane is of the intermediate pattern, remove the steel clip from the Frog and the parts will fit.

In order that we may fill your order correctly, kindly advise us which style Plane you have.

The difference in construction of the Frogs and Bottoms is very clearly shown in the illustration above.

BARTLETT'S BENCH

All Bartlett planes are fitted with superior irons, manufactured from best cast steel and fully warranted.

ONE DOZEN IN A BOX

FLOOR SCRAPERS

The Little Giant floor scraper is a device used for scraping any kind of a floor. The blade is mounted on a frame at an angle of 60 degrees, and the frame is mounted on four rollers. The large roller is a weight of 65 lbs., and is used to give the pressure upon the blade when the scraper is in operation.

It has a capacity of from five to seven squares (100 square feet in a square) per day. The handle can be shortened, when necessary, for small rooms. Every inch of the floor can be scraped, as the blade extends to the full width of the frame and allows it to go along the base-board and quarter-round strip. Six blades are included with each machine, which will scrape 15,000 square feet of floor.

No. T90—"Little Giant," complete with 6 blades, 7½ in. long, 2½ in. wide, w't crated 105 lbs.each \$56.00
ONE IN A BOX

ALL OF ABOVE SQUARES
HALF DOZEN IN A BOX

SQUARES

All our steel squares have hardened corners which keeps the corners from becoming blunt or worn. squares have a special high polished finish.

Octagon "Eight Square Scale."

This scale is one the face side of the tongue and is for laying out an eight square on a square stick of timber. Suppose the timber is eight inches square. Take the eighth mark from 0 in your divider and lay off from each side of the center line on each of the four sides of the timber, work off the corners up to these lines.

Hundredth Scale.

There is one inch graduated into one hundred parts, sub-divided into twenty parts, that will be found convenient when using the brace and rafter measures, where decimal fraction occur. This is located in the corner near the brace measure.

Brace Measure.

On back of tongue is the brace measure. 39-39-55.16 means that with a run of 39 in. each way the length of brace is 55.16 in. 18-24-30 is 18 in. run one way and 24 in. the other way, length of brace 30 in.

Board Measure.

This is on the back of the body when you look at the square with the tongue in your left hand. If you have 14 ft. boards, look at 12 in. on the square. The lengths are the figures under it along the mark.

Find 14. Find next the figure that is the same as the width. If it is 6 in., there are 7 ft. in the board. If a board is 10 ft. long and 15 in. wide, proceed same as before, and find 12 ft. 6 in. If the board is 16 ft. long, double the 8 ft. reading.

OUR VERY BEST POLISHED STEEL

No. 10 **OVS**—Extra, body 1 ft. x 1½ in., tongue 8x1 in., face marked in 4ths and 8ths, back in 4ths and 12ths, w't per doz. 11 lbs.per dozen \$20.70

HALF DOZEN IN A BOX

EVD RAFTER AND FRAMING

The "EVD" framing square excels in the accuracy of its reference tables for side cuts. Where other squares have only inch line marks, making close approximates to the exact angles impossible, the "EVD" has a ¼ in. line of graduation on the body and a constant or turning point on the tongue, the 12 inch mark. It will readily be seen that the distance between the ¼ in. lines is so small that when the exact angle falls between these marks the distance to the nearest one can not exceed ½ of an inch, which is less than the size of a pencil mark in an angular opening of 12 inches. It also has a single set of reference numbers, making it impossible to transpose or get the angle wrong by laying the square on the timber with the body and tongue on the wrong numbers.

Another feature to be found on the "EVD" square, are the special marks on each and every graduation mark referred to in the tables. There is still another safe guard against mistakes by having different special marks for jack rafters and hip or valley rafters. These marks are also shown in the lettering at the end of the square connected with the directions.

It is necessary to remember but one number while marking framing on a lot of timber; with others there are two. This square has six rows of figures with large and distinct fractions, feet and inch marks. All cuts on the various members of a roof are marked by the figures in the fifth and sixth rows in the tables. The inch lines do not run across the space occupied by tables the decimal point

is in its proper place. Has Essex's board measure on it while other squares have not. Hundredth scale is one inch graduated into one hundred parts, sub-divided into twenty parts, convenient when using brace and rafter measures, where decimal fraction occur, located in corner near brace measure.

Framing, body 24x2 in., tongue 16x1½ or 1½ in., face marked in 4ths, 8ths and 16ths, with eight-square scale and rafter measure, back in 10ths, 12ths and 32nds, with board and brace measure and hundredth scale, w't per doz. 29 lbs.

No. 100F EVD—Nickel plated copper, per dozen\$56.00

QUARTER DOZEN IN A BOX

No. 100AF—Nickel plated framing, body 24x2 in., tongue 16x1½ in., face marked in 8ths and 16ths, back in 10ths, 12ths and 32nds, with rafter, octagon framing, 100th scale eight-square and brace measure, w't per doz. 29 lbs., per dozen\$56.00

SQUARES

EAGLE TAKE-DOWN

The latest improved in Take-down square. The strongest construction, the tongue is made of one solid piece, the body is also milled from the solid. The proportions of the two parts are such as to give the strongest possible joint. The cam is the only one ever offered that will firmly hold the tongue into the body. Being eccentric, it draws the two parts together. It is the only square hole locking device ever offered. The convenience and durability of this square hole, into which if the key should be lost any square tool or file shank will successfully operate, needs only to be seen to be appreciated.

No. 1000—Regular, steel, oxidized copper finish, yellow figures and markings, body 2 ft. x 2 in., tongue 16x1½ in., face marked in 4ths, 8ths and 16ths, with octagon eight square-scale, back in 4ths, 8ths, 10ths, 12ths and 32nds, with board and brace measure and hundredth scale, w't per doz. 28 lbs.per dozen \$81.60

No. 1001—Framing, steel, oxidized copper finish, yellow figures and markings, body 2 ft. x 2 in., tongue 16x1½ in., face marked in 4ths, 8ths and 16ths, with octagon eight square scale and rafter measure, back in 10ths, 12ths and 32nds, with board and brace measure and hundredth scale, w't per doz. 30 lbs.per dozen \$88.60

Only framing square made containing the board measure in addition to complete framing tables.

The two parts of the square and the key to operate the locking cam, are enclosed in a rust-proof enamel leather case.

ONE IN A CANVAS CASE

MAIL ORDER DEPARTMENT

Our constant attention in sixty-seven years of business has been given to the perfection of the system of handling mail orders. Our object has always been to handle them with the greatest possible speed, with the result that we are enabled, in most cases, to ship mail orders the same day they are received.

RULES

STANLEY'S ZIGZAG EXTENSION

Boxwood stained, brass joints, slides and tips, marked in 8ths and 16ths in., $\frac{1}{8}$ in. wide.

These rules have all the advantages of the regular Zigzag rules, and in addition have at one end an extension slide, by the use of which exact inside measurements may be readily obtained.

Nos.	204	206
Length, ft.	4	6
W't per doz., lbs.	2 $\frac{1}{2}$	3 $\frac{1}{2}$
Per dozen	\$10.90	14.40

Length, ft.	5	6
W't per doz., lbs.	2	2 $\frac{1}{2}$
Per dozen	\$18.00	21.60

HALF DOZEN IN A BOX

LUFKIN EXTENSION SPRING JOINT

Boxwood, extra heavy, brass plated spring joints. Graduated both sides in inches, eighths and sixteenths. When extension slide is used gives measuring capacity 6 in. additional length.

Rule is more rigid when extended than the ordinary folding rule, thus making it better adapted for upright measurements.

Particularly designed for taking inside measurements of openings such as door and window frames, for boilers, etc.

The first section is fitted with a graduated brass slide which cannot come loose or fall out as it is securely locked at both ends. To obtain inside measurements, open rule to within six inches or less of distance between points to be measured. Extend brass slide by push button to point of measurement. Add measurement on brass slide to that shown at extreme end of rule, which will give you exact distance between points measured. Extension slide admirably adapted to measuring depth of mortises and other holes.

A rule that will especially appeal to carpenters, architects, inspectors, contractors, automobile workers and others.

DOCTOR

"Non-Splittable" and will outwear many of the short ferruled handles.

The ferrule is made of heavy pressed steel, enlarged at the head, and having an inwardly returned, curved, sharp-edged lip, which firmly locks the wooden portion within the enlarged end of the ferrule, when driven into place.

The wooden section is shaped correctly to fit the hand and has a taper-bored hole allowing file to be held firmly in place.
